SUMMARY

Machine Learning and Agentic AI developer skilled in building LLM-powered agents, RAG pipelines, and computer-vision systems, with hands-on experience in agentic tool orchestration, capability-based model routing, and end-to-end ML/AI pipeline development.

EDUCATION

Anil Neerukonda Institute of Technology and Sciences (ANITS), Visakhapatnam, AP

Bachelor of Technology (B.Tech) in Computer Science and Engineering (Penultimate Year) — 2024 – 2028

Engineering GPA: 9.21 / 10.0 Core Coursework: Data Structures & Algorithms, OOP, Operating Systems, Computer Networks, DBMS, System Design, Machine Learning, Deep Learning, Neural Networks.

WORK EXPERIENCE

Android Game Developer Intern — Namoon 3D Labs | Jun 2026 – Jul 2026

- Built a board-based Formula 1 3D racing application for Android, optimizing game state logic and rendering performance to deliver smooth 60fps gameplay.
- Engineered a scalable, cross-platform web-based 3D racing game tested by 200+ users, focusing on high-performance interactivity and cross-browser compatibility.

OPEN SOURCE & PERSONAL PROJECTS

Sanctum (Local-First Secured Agentic IDE) | *Python, Flask, LangChain, Ollama, Local LLMs, MCP, Scikit-Learn, JavaScript, SSE*

- Architected Fluid Intelligence, a capability-based routing pipeline that classifies requests and dynamically selects the most suitable local LLM for coding, reasoning, documentation, vision, and general workloads.
- Built a workspace-scoped Local Knowledge Base using TF-IDF and cosine similarity to retrieve relevant project context while maintaining separation of workspace files, knowledge, and history.
- Engineered an agentic execution pipeline integrating tool calling, file operations, Python/terminal execution, document generation, tool feedback, verification, and real-time execution streaming through SSE.
- Implemented local security boundaries using Sanctum Locker and workspace path containment to protect sensitive resources and minimize unintended cross-workspace access.

AIMS (Intelligent Industrial Management System) | *Python, TensorFlow, Deep Learning, Computer Vision*

- Led a team to develop an AI-driven workplace safety platform for real-time hazardous condition monitoring across industrial facilities.
- Automated real-time video analysis by integrating Machine Learning pipelines with Deep Learning-based I3D Action Recognition.
- Achieved ~90% detection accuracy and reduced incident response times by deploying automated alerts for on-site safety violations.

Anti-Ragging Portal (College Enterprise System) | *MongoDB, Express.js, React.js, Node.js, Three.js*

- Built a full-stack MERN complaint management system for the college, deployed on the institution's local server to handle real-time incident reporting and case tracking.
- Developed an interactive 3D data visualization dashboard using Three.js, giving admins a real-time visual breakdown of complaint volume, categories, and resolution status.
- Implemented granular Role-Based Access Control (RBAC) with JWT authentication to secure sensitive complaint data and restrict access by admin, faculty, and student roles.

LEADERSHIP & EXTRA-CURRICULAR

- Competitive Programming: Solved 350+ algorithmic problems on LeetCode, focusing on core data structures including trees, graphs, and dynamic programming.
- Hackathons: Led and won 3+ hackathons, building and shipping functional prototypes under tight deadlines in team-based, competitive settings.
- Student Coordinator | ICANITS 2026: Led logistical planning for an International Academic Conference, managing digital platform access for 500+ researchers and coordinating volunteer teams.

CERTIFICATIONS

- Oracle Agentic AI Foundations Associate — Oracle University
- Machine Learning Specialization — Stanford Online
- Generative AI & LLM Essentials — Google
- Python & SQL — Scalar
- Web Development Fundamentals — Udemy

SKILLS

Languages: Python, C/C++, Java, JavaScript, SQL, Go.

AI / ML: Machine Learning, Deep Learning, Neural Networks, NLP, Computer Vision, LLMs, RAG, LangChain, AI Agents, MCP (Model Context Protocol).

Core Concepts: Data Structures & Algorithms, Concurrency, Distributed Systems, System Design, REST APIs, SDLC Methodologies.

Frameworks & Tools: Django, Flask, React.js, Node.js, Express.js, TensorFlow, PyTorch, Scikit-Learn, Pandas, NumPy, Matplotlib, Seaborn, Git, Docker, AWS, MongoDB.
